

Data Scientist

Works with the whole DS workflow but is expected to present solutions to the business problems. Must align all the expectations around the team involved in the project, and usually, it covers products, marketing, sales, IT, and finance.

Data Engineering / Machine Learning Engineering

More related to the ETL, EDA, and implementation steps focused on optimizing the data quality and scale aspects. Must know the foundation of machine learning to help the data scientist during the model creation and implement the strategy developed.
